Retail Sales & KPI Dashboard

Task 05 — Interactive Dashboard & KPI Visualizations

KPI snapshot based on the supplied retail order dataset. Net revenue includes Paid orders only.

Metric	Result
Net Revenue (Paid)	INR 6,013.35
Valid Orders	6
Average Order Value	INR 1,503.34
Units Ordered	10
Payment Success Rate	66.7%
Quality-approved rows	6
Raw rows	12

Data quality and KPI methodology

Exact duplicate rows are removed. 5 rows are excluded from KPI calculations because of missing required fields, invalid dates, non-numeric/non-positive quantities, or discounts outside 0–100%.

Missing discount values are treated as 0% for this demonstration; confirm this assumption with the data owner. Revenue is recognized only for Paid orders; Pending, Failed and Refunded orders contribute zero net revenue.

Churn rate and customer acquisition cost are not calculable from the supplied fields because customer-level history and acquisition-spend data are absent. The dataset is small and should be treated as a demonstration.
